 Colombo, Sri Lanka

Professional Summary

Results-driven Software Engineer with hands-on experience in full-stack web development, backend systems, and database management. Skilled at building scalable applications, optimizing performance, and collaborating with cross-functional teams. Passionate about problem-solving, clean code, and delivering impactful digital solutions.

EDUCATION

Sabaragamuwa University of Sri Lanka

2017 – 2022

B.Sc. (Hons) in Computing and Information Systems

Course Highlights

- Software Engineering & Project Management: Delivered team projects using Agile methodology and SCRUM.
- Database Systems & SQL: Designed normalized schemas, optimized queries, and implemented stored procedures.
- Web Development (Front-end & Back-end): Developed responsive applications using PHP, Laravel, and ReactJS.
- Cybersecurity Fundamentals: Learned secure coding practices, encryption basics, and vulnerability prevention.
- Cloud & Distributed Systems: Exposure to Firebase, RESTful APIs, and scalable application architecture.

EXPERIENCE

Koombiyo IT | 

July 2024 – Present

Associate Software Engineer

- Designed and maintained scalable web applications using PHP, SQL, React , Node, Codeigniter , Wordpress Plugin Development, Shopify App Development and REST APIs.
- Optimized database queries improving response time.
- Collaborated with QA and product teams to deliver bug-free releases.
- Ensured performance, quality, and responsiveness

SPIL Labs

May 2023 – December 2023

Associate Implementation Engineer

- Provided remote technical support and performed system installations for enterprise clients.
- Designed and customized Crystal Reports to meet client reporting needs.
- Researched new technologies and improved SQL Server performance tuning.
- Documented technical workflows, reducing troubleshooting time for future deployments.

Vattz

March 2021 – September 2021

Intern Software Engineer

- Developed full-stack web applications using ReactJS, Node.js, and Firebase.
- Built reusable UI components and REST APIs for internal tools.
- Worked closely with senior engineers to resolve production bugs and improve code quality.

PROJECTS

Real-Time Chat Application | [Github](#) | [Web](#)

Technologies: React.js, Node.js, Express, MongoDB, Socket.io, JWT, Zustand, TailwindCSS

- Developed a full-stack real-time chat application with instant messaging using WebSockets (Socket.io), supporting multiple chat rooms and live typing indicators
- Integrated JWT-based authentication, enabling secure user sessions and protected route access.
- Implemented global state management using Zustand to handle real-time UI updates and auth states.
- Achieved <100ms message latency under load with optimized Socket connections and backend logic.

EZ Shopper - Ecommerce App | [Github](#)

Technologies: Laravel, MySQL, Blade, Bootstrap/Tailwind, Stripe

- Designed and deployed an e-commerce application with full admin panel for product, category, and order management.
- Integrated Stripe payment gateway for secure card payments and real-time order processing.
- Built PDF export functionality for admin reports and automated email notifications for order confirmations.
- Implemented a responsive frontend with user authentication, product reviews, and nested comment threads.

Lullabye - ECommerce App | [Github](#)

Technologies: React.js, MongoDB, Express, Node.js

- Built a complete e-commerce platform with product listings, shopping cart, and secure user auth
- Designed a responsive frontend with category-based browsing (Men/Women/Kids) and detailed product views.
- Created RESTful API routes for managing users and products using Express & MongoDB.

School Management System | [Github](#)

Technologies: PHP, CodeIgniter, MySQL, JavaScript, JQuery, Bootstrap

- Created a multi-user school management system with role-based access for Admin, Teacher, and Student.
- Developed modules for student/teacher management with Excel import/export and PDF generation for reports.
- Built responsive UIs with dynamic tables, modals, and form validation using JQuery and Bootstrap

Government Hospital QR-Based Visit Management System | [Github Frontend](#) | [Github Backend](#)

Technologies: React, TypeScript, Node.js, Express, MongoDB, JWT, HMAC, RBAC, OpenAPI

- Architected a secure full-stack hospital system implementing a QR-driven, zero-trust visit lifecycle.
- Designed and enforced RBAC with least-privilege data access and license validation controls.
- Engineered signed, expiring QR tokens to prevent unauthorized patient lookup and ensure visit-level access isolation.
- Developed Implemented Swagger-first API contract with fully typed frontend integration and centralized audit logging for traceability

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, PHP, SQL, C#

Backend: Node.js, Express.js, CodeIgniter, Laravel, .NET, RabbitMQ

Frontend & UI: React.js, Bootstrap, Tailwind, Material UI, HTML, CSS

Database: MongoDB, MySQL, Firebase

Architecture & Concepts: RESTful APIs, WebSocket (Socket.io), Authentication, MVC, Agile Development

CMS & Platforms: WordPress (Plugin Development), Shopify (App Development)

Frameworks/CMS: WordPress (Plugin Development), Shopify (App Development)

Testing & QA: Jest, Cypress, Super Test,

DevOps & Tools: Docker, CI/CD Pipelines, Render, Vercel, Git, Figma, Jira, Crystal Reports, Creately, Swagger
